

**Amendments to the Specification:**

**Please amend the paragraph beginning on page 5, line 29 through page 6, line 2 as follows:**

The self cleaning filter assembly 52 includes a casing or duct 54. The casing 54 may be a peripheral case bordering close to the internal walls of the pathways of the exhaust system. The filter assembly 52 should substantially block the pathway so that only a minimal volume of air does not pass through the filter assembly 52. A first filter 56 and a second filter 62 are located within the casing 54 in the path of airflow for filtering contaminants such as, for example, oil droplets, dust, particulate matter and the like, from the air flowing in direction 50.
